PROFESSIONAL SUMMARY

Full-stack developer who builds AI agents and web platforms and runs them in production. Founder of Zaqi Solutions, where I build **Onix**, a multi-tenant WhatsApp AI sales agent (Python, FastAPI, LangGraph, PostgreSQL + pgvector). Built a real-time **voice agent** that takes Major Incident report calls (Pipecat, Deepgram, Claude). Sole developer of Lingolandias Academy, a learning platform with **200+ active users** since 2023. I own the whole system: database, backend, agent, UI and deployment. English C1.

CORE COMPETENCIES

AI Agents & LLM Tool Calling | LangGraph / Pipecat | Voice AI (STT, VAD, TTS) | Embeddings & pgvector | Python & TypeScript | React / Next.js | NestJS / FastAPI | PostgreSQL | Real-Time (WebSockets, WebRTC) | Docker, Nginx, VPS

WORK EXPERIENCE

Zaqi Solutions

Sep 2026 – Present

Founder & Lead Engineer | Bogota, Colombia · zaqisolutions.com

- Built **Onix**, a multi-tenant WhatsApp AI sales agent for shops. It answers catalog questions, recognizes products from customer photos, takes orders, collects delivery data and guides payment.
- Designed the agent as a **LangGraph** state machine with stage-scoped tools. Prices, stock and totals come only from the database; a grounding check rewrites any amount that no tool returned.
- Routed each conversation stage to a different model (**Claude, Gemini, DeepSeek**) with automatic fallback. Product photo matching uses vision, embeddings and **pgvector**.
- Made orders idempotent with a checkout fingerprint and atomic stock updates; isolated tenants with PostgreSQL **row-level security**.
- Rebuilt the agent four times from measured production data (14 days, 589 turns, 37 orders). One version covered its decision logic with an exhaustive sweep of 10,000+ input combinations that runs in under a second.
- Deployed with Docker Compose and Nginx on a Linux VPS, with a React panel and CRM for each business.

Teleperformance

May 2026 – Present

Major Incident Management Analyst | Bogota, Colombia

- Triage incidents reported by operations staff, take the full report and run the incident bridge with technical teams.
- Designed and built a pilot **AI voice agent** that takes report calls for the MIM line in natural Colombian Spanish: **Pipecat**, Deepgram STT, Silero VAD with smart-turn detection, **Claude Haiku** and TTS with fallback, over WebRTC or Twilio.
- The agent stores a report field only when the caller's own words support it, and computes the next question from data so it never asks twice. Strict mypy, ruff and pytest on every commit.

Lingolandias Online School

Nov 2023 – Present

Full-Stack Developer (Sole Developer) | Remote

- Designed, built and run **lingolandias.com**, a learning platform with **200+ active users**: live one-on-one and group classes on **LiveKit** with recordings, real-time chat (Socket.IO), scheduling, and role-based access for admins, teachers and students.
- Added a built-in LMS (courses, assessments, flashcards) and a Windows desktop app for classes (Electron).
- Moved the schema to versioned TypeORM migrations and closed security gaps in auth and API responses.
- Built the public site **lingolandias.net** in Spanish, English and Polish, with a language-level quiz.
- Stack: React, Redux, Tailwind, NestJS, PostgreSQL, AWS S3, Docker, Nginx and Let's Encrypt on a VPS.

Intouch CX

Oct 2023 – May 2026

Technical Support Representative (Jul 2025 – May 2026) · Customer Service Representative, L'Oreal account (Oct 2023 – Jul 2025)

- Resolved software issues for corporate users through chat and remote desktop (VPN, accounts, passwords), with cases tracked in ServiceNow and Jira.
- Handled L'Oreal customer cases in English by phone, chat and email, including health-related complaints that needed cross-department escalation.

SENA - Servicio Nacional de Aprendizaje

Feb 2019 – Sep 2023

English Instructor | Colombia

PROJECTS

Grillr — AI mock-interview SaaS

2026

grillr-seven.vercel.app · github.com/koatth60/grillr

- Built solo. Claude generates 5 interview questions from a job description and scores each answer 1–10 with feedback. Next.js, TypeScript, NestJS, Prisma, PostgreSQL, Stripe.

Handy Pro — services marketplace (team of 6)

Nov 2024

- Backend team: real-time chat gateway (Socket.IO), Stripe payments with webhooks, Google OAuth and database preload. NestJS, TypeORM, PostgreSQL.

EDUCATION

Full-Stack Developer Bootcamp - Henry

2024

Environmental Engineering - Universidad Francisco de Paula Santander Ocana

2017

SKILLS

AI: LangGraph, Pipecat / Pipecat Flows, Claude API, Gemini, DeepSeek, tool calling, embeddings, pgvector, vision, Deepgram, TTS, WhatsApp Cloud API

Languages: Python, TypeScript, JavaScript, SQL

Backend: FastAPI, NestJS, Node.js, Express, SQLAlchemy, TypeORM, Prisma, Socket.IO, REST, JWT, Stripe

Frontend: React, Next.js, Redux, Tailwind CSS, Vite, Electron

Data & DevOps: PostgreSQL (row-level security, migrations), Docker Compose, Nginx, Linux VPS, AWS S3, Vercel, Git, GitHub

Quality: pytest, mypy, ruff, Jest, Vitest

Spoken languages: Spanish (native), English C1 (CEFR)
